Re: National Institute of Food and Agriculture Hall of Fame Award - Letter of Recommendation

Dear Kelly Sprute,

This letter is to endorse Mr. Fulvio Balmelli for his incredible and extraordinary Technology, The Kyminasi Plants "Crop Booster", to improve the agro-harvest of all types. I am really blessed to have met Mr. Francesco Arlia, who is the CEO of Harvest Harmonics that has provided me the opportunity to exclusively represents this Technology of Mr. Balmelli in Puerto Rico.

Through the generosity of Mr. Balmelli and Mr. Arlia we accepted an offer to receive \$1,000,000 of the reference technology to help rebuild the agricultural industry of the small and medium farmers of the island of Puerto Rico. In November of 2019, at the initial launch of this technology and thereafter the incredible challenges to the Puerto Rico small farmers: the presence of two major disasters just one week between them (hurricanes Maria and Irma), the arrival of the COVID-19 Pandemic and earthquakes, that destroyed the economy of Puerto Rico, this Technology! was granted to our small and medium local farmers to help them rebuild.

Nevertheless, the presence all these challenges, we have been able to assist and to rebuild Puerto Rico farming economy. Our Small farmers started to use the Kyminasi Plants – Crop Booster, as it is known now! This Technology has proven to have incredible results on the Puerto Rico farms that otherwise would not have these benefits if it wasn't

ECO-PARQUE DEL TANANA, CORP.

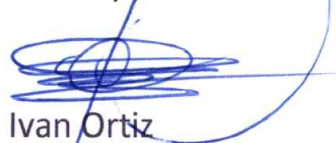

for the humanitarian generosity of Mr. Balmelli and Mr. Arlia which helped us rebuild our small and medium farmers economy.

It is with great desire an honor that I would like to endorse Mr. Balmelli for his invention and Technology and the help provided to our farmers in Puerto Rico. Based on my own farming results and the experience of my farmer associates, and following the extraordinary agro-farming results internationally, the jobs generated among farms operations worldwide, the increased production and the quality of the harvests (yields), the reduction of greenhouse gases that are triggering a global warming, the reduction of petrochemicals during the farming operations, a significant reduction on the use of water, which is a major problem globally!, I am proud to be endorsing Mr. Balmelli for his technology discovery and his contributions to our humanity.

Mr. Balmelli's Technology is almost a science fiction event and probably too advanced for our times, based on current agro-farming practices, but the results are proving that it is true and that worldwide there shall be a new science to be implemented to secure our future farming activities. I can attest the extraordinary results and the harvest outcome on various products where we have installed and put to work the Plant Booster locally. I am honored to be an awardee of the grants given by Mr. Arlia and Mr. Balmelli of this extraordinary Technology.

Again, I am proud to endorse Mr. Balmelli for his Technology and the contributions to a better World and the great benefits that this technology contributes to our humanity.

Thank you.

Ivan Ortiz

President & CEO
